

Password Reset & Credential Recovery Guide

SaaS Platform — Support Documentation v2.1

Overview

This document provides a complete guide to resetting passwords, recovering locked accounts, managing two-factor authentication (2FA) recovery, and handling corporate SSO credential issues. Follow each section in order based on your specific scenario.

Section 1: Standard Password Reset

1. Navigate to `app.platform.io/login` and click **Forgot Password** below the sign-in form.
2. Enter the email address associated with your account and click **Send Reset Link**.
3. Open the email from `noreply@platform.io` (check spam if not received within 5 minutes).
4. Click the **Reset Password** button in the email. The link expires after 30 minutes.
5. Enter a new password meeting the requirements: minimum 12 characters, at least one uppercase letter, one number, and one special character (!@#\$\$%^&*).
6. Confirm the new password and click **Save Changes**.
7. You will be automatically redirected to the login page. Sign in with your new password.

Password Requirements Summary

Requirement	Minimum	Recommended
Length	12 characters	16+ characters
Uppercase letters	1	2+
Numbers	1	2+
Special characters	1 (!@#\$\$%^&*)	2+
Password reuse	Cannot reuse last 5	Use a password manager

Section 2: Locked Account Recovery

Accounts are automatically locked after 5 consecutive failed login attempts as a security measure. The lock expires automatically after 15 minutes. To unlock immediately:

1. Use the **Forgot Password** flow (Section 1) — completing a password reset also unlocks the account immediately.
2. Contact support at `support@platform.io` with your Account ID — an agent can manually unlock within business hours.
3. If 2FA is preventing login after a correct password, proceed to Section 3.

Section 3: Two-Factor Authentication (2FA) Recovery

If you have lost access to your 2FA device (phone, authenticator app), use one of the following recovery methods:

Method A — Backup Recovery Codes (Recommended)

1. On the 2FA challenge screen, click **Use a recovery code instead**.

2. Enter one of the 8-digit backup codes you saved when 2FA was first enabled.
3. Each code can only be used ONCE. Generate new codes immediately after recovery via Dashboard → Account → Security → 2FA → Regenerate Backup Codes.

Method B — Identity Verification via Support

If backup codes are also unavailable, contact support@platform.io with the subject line: 2FA RECOVERY REQUEST — [your registered email]. You will be asked to provide government-issued identification and answer account security questions to verify identity before 2FA is disabled.

Section 4: Corporate SSO / SAML Issues

- Cannot log in via Google SSO: Ensure your Google account email matches your platform account email exactly. Contact your Google Workspace admin if the account is restricted.
- SAML assertion errors: The SAML certificate configured in Dashboard → Security → SSO may have expired. Re-upload the Identity Provider (IdP) certificate.
- Redirect loop on SSO login: Clear browser cookies and try in an incognito window. Disable any browser extensions that modify request headers.
- SSO not available: SSO is available on Pro and Enterprise plans only. Starter plan users must use email/password login.

Section 5: Contacting Support

If you have followed all steps above and are still unable to access your account, please contact our support team with the following information:

- Your registered email address
- Your Account ID (visible on any invoice or in the URL when logged in)
- The exact error message or screenshot
- The browser and operating system you are using
- Steps already attempted
